Get App

Hi **Yuvraj Tale,**

Opportunity at Volody looks like a strong fit.

AWS/DevOps Engineer

Volody

AWS | CI/CD | Python

Location: Mumbai

Experience: 1 - 5 Years

Apply Now

Early applicants are 3x more likely to get noticed

About the Role :

Volody is an enterprise software company looking for an AWS / DevOps Engineer with prior experience in AWS / Azure and cloud installations for large corporate houses.

Responsibilities :

- Lead backend development efforts by designing and managing backend APIs, creating dashboards, user interfaces, and developing data models.

- Manage automated deployment with CI/CD pipelines using Docker, Docker Hub, ECR, and AWS CodePipeline.

- Create shell scripts to automate installation of dependencies and configurations.

- Implement Application Load Balancer (ALB) for secure web traffic and enforce HTTPS using AWS Certificate Manager.

- Develop interactive dashboards using AWS QuickSight and Power BI.

- Manage data operations with AWS Glue, MySQL, and Python scripting for ETL and upsert operations.

- Engineer integration solutions between Salesforce and AWS using Apex triggers.

- Manage infrastructure as code using AWS CloudFormation.

- Architect real-time data analytics platforms using AWS Glue, Redshift, and S3.

- Handle laptop procurement, maintenance, and repair.

Tech Stack :

- Cloud : AWS, Azure

- Tools : Docker, Jenkins, Kubernetes, Terraform, AWS CodePipeline, AWS Glue, Redshift, S3, QuickSight, Power BI, MySQL

- Languages : Python, Shell Scripting, Apex

- Integrations : Google SSO, Microsoft Active Directory, SharePoint, Salesforce
